Matrix's Upgraded Internet Tracking Site Launches 1 November

Managing a vehicle can be quite consuming of time and energy levels. Between tracking private and business trips, and documenting and calculating fuel and maintenance costs, customers can spend hours each month making sure they stay on top of their vehicles' admin.

Matrix understands that there are many other things that customers would rather spend their time doing and so in order to make their lives easier, we are launching an upgraded version of our Internet Tracking site. This new site will now include Tax Logbook and other tools that will help customers to manage all their vehicle expenses and activities from a single platform!

By using your Matrix Internet Tracking site customers will be able to:
- Manage expenses - fuel, maintenance
- Manage trips – private and business
- Track vehicle trips – past and present

Furthermore, as it is web-based, customers can access their Internet Tracking & Logbook anywhere, at anytime and no additional software needs to be downloaded!
